

Compensator rubber

Compensators made from rubber that absorbs movement and vibrations at connections for containers and tank while giving some buffering effect for pressure surges. Particularly recommended at large temperature fluctuations, strong flows or for vibration from pumps. The absorbent of vibration also reduces sound level. Mounted in combination with Flanged connection with corresponding diameter.

Variants	
60031	Compensator rubber DN50
60032	Compensator rubber DN65
60033	Compensator rubber DN80
60034	Compensator rubber DN100
