

Compensator rubber

Compensators made from rubber that absorbs movement and vibrations at connections for containers and tank while giving some buffering effect for pressure surges. Particularly recommended at large temperature fluctuations, strong flows or for vibration from pumps. The absorbent of vibration also reduces sound level. Mounted in combination with Flanged connection with corresponding diameter.

Variants

60756	Compensator rubber DN200
60753	Compensator rubber DN100
60754	Compensator rubber DN125
60750	Compensator rubber DN50
60755	Compensator rubber DN150
60751	Compensator rubber DN65
60752	Compensator rubber DN80
