

CPX Infiltrationkit 18m², bio modules with accessories

CPX Infiltration Package 18 sqm for efficient and reliable wastewater treatment. Suitable for greywater and WC for one household. Several infiltrations packages can be used to build a larger drain field for multiple households. Use together with CPX Septic tank. The modules consist of spiral-wound threads that together form a tubular mesh. On the net, a natural bio skin is formed, which creates an effective degradation of pre-contaminations in the wastewater. The design also allows water and air to pass through the modules. This provides optimal oxygenation and reduces the risk of clogging the modules.
